

FORENSIC SCIENCE

Aaron Zierzow and Alexis Berget are Forensic Crime lab specialists from the Mpls Crime Lab. They visited the tech site and spoke to Ms. Andersen's Forensic Science Class. They came to teach the students about the collection of latent fingerprints. Each student had the opportunity to gather their own fingerprints using three different methods.

The students learned the value of collecting fingerprints that would be used as evidence and how to collect it properly so they could be used in court if necessary. The students have learned how to collect and identify fingerprints using a variety of methods and the importance of a job well done. People lives and their destiny could depend on it.
